

Factor Loadings: Interpreting Beta Coefficients

Factor Loadings by Asset Type

Beta Interpretation Guide

INTERPRETING FACTOR LOADINGS

MKT Beta (Market Sensitivity)

- Beta > 1 : More volatile than market (aggressive)
- Beta = 1: Moves with market
- Beta < 1 : Less volatile (defensive)
- Beta ~ 0 : Uncorrelated with market

SMB Beta (Size Exposure)

- Beta > 0 : Behaves like small caps
- Beta < 0 : Behaves like large caps
- Beta ~ 0 : No size tilt

HML Beta (Value Exposure)

- Beta > 0 : Behaves like value stocks
- Beta < 0 : Behaves like growth stocks
- Beta ~ 0 : Blend

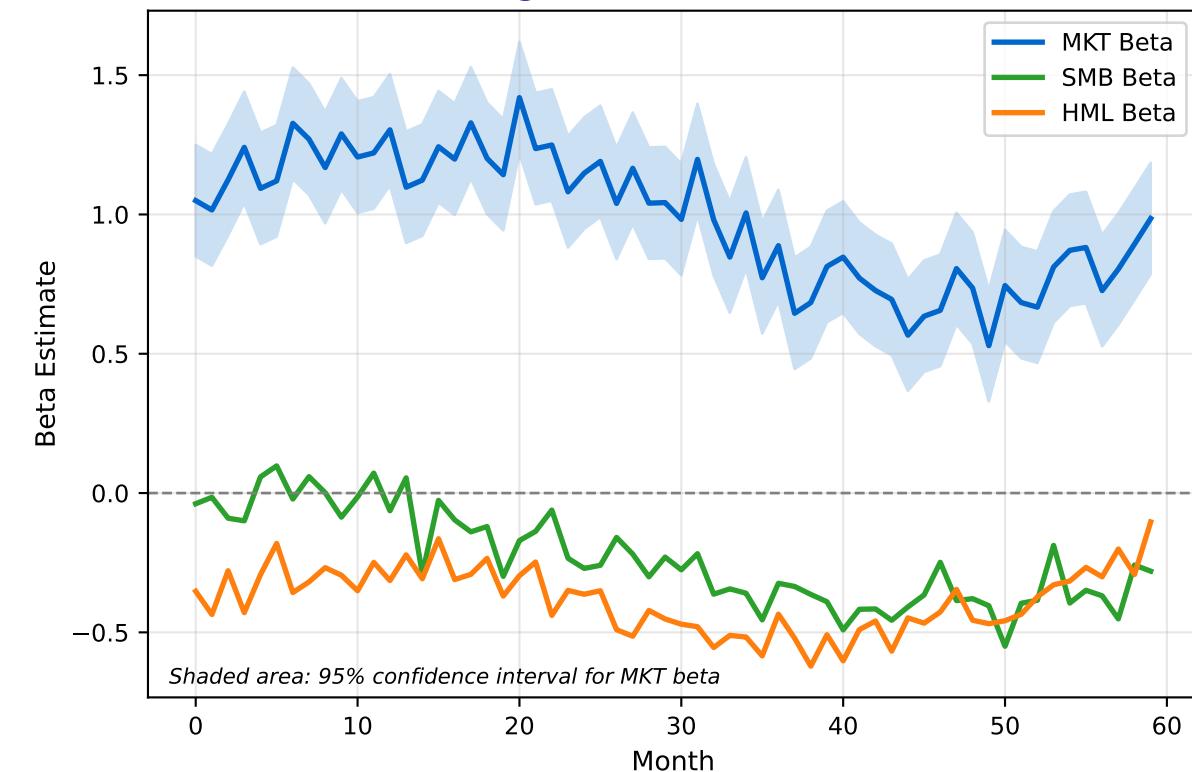

EXAMPLE: Tech ETF (QQQ)

- MKT = 1.15: Slightly more volatile
- SMB = -0.15: Large cap tilt
- HML = -0.45: Strong growth tilt

EXAMPLE: Small Cap ETF (IWM)

- MKT = 1.20: More volatile
- SMB = 0.85: Strong small cap exposure
- HML = 0.25: Slight value tilt
