

Lesson 13: Descriptive Statistics

Data Science with Python – BSc Course

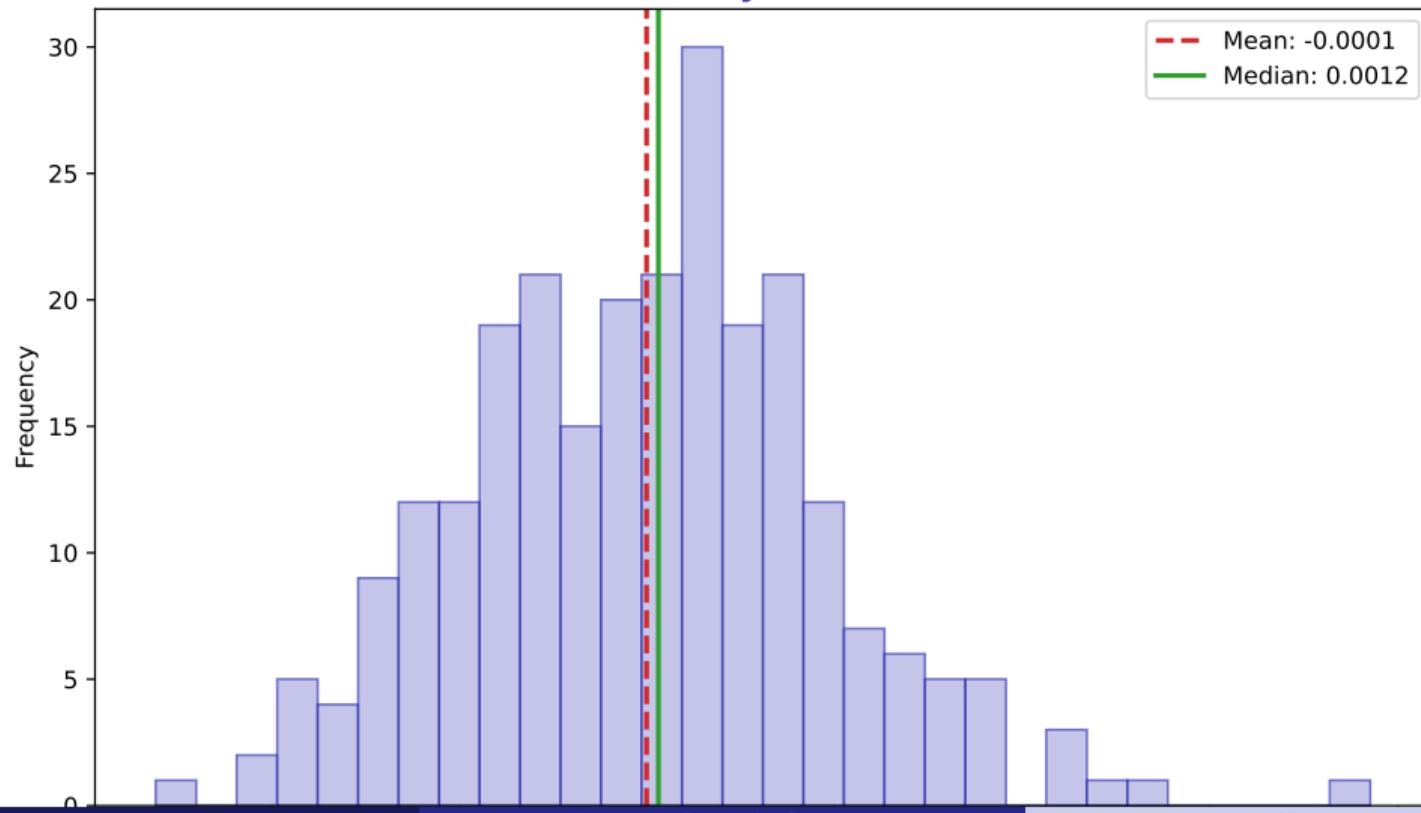

45 Minutes

After this lesson, you will be able to:

- Calculate mean, median, mode
- Measure dispersion (std, variance, range)
- Interpret quartiles and percentiles
- Analyze skewness and kurtosis

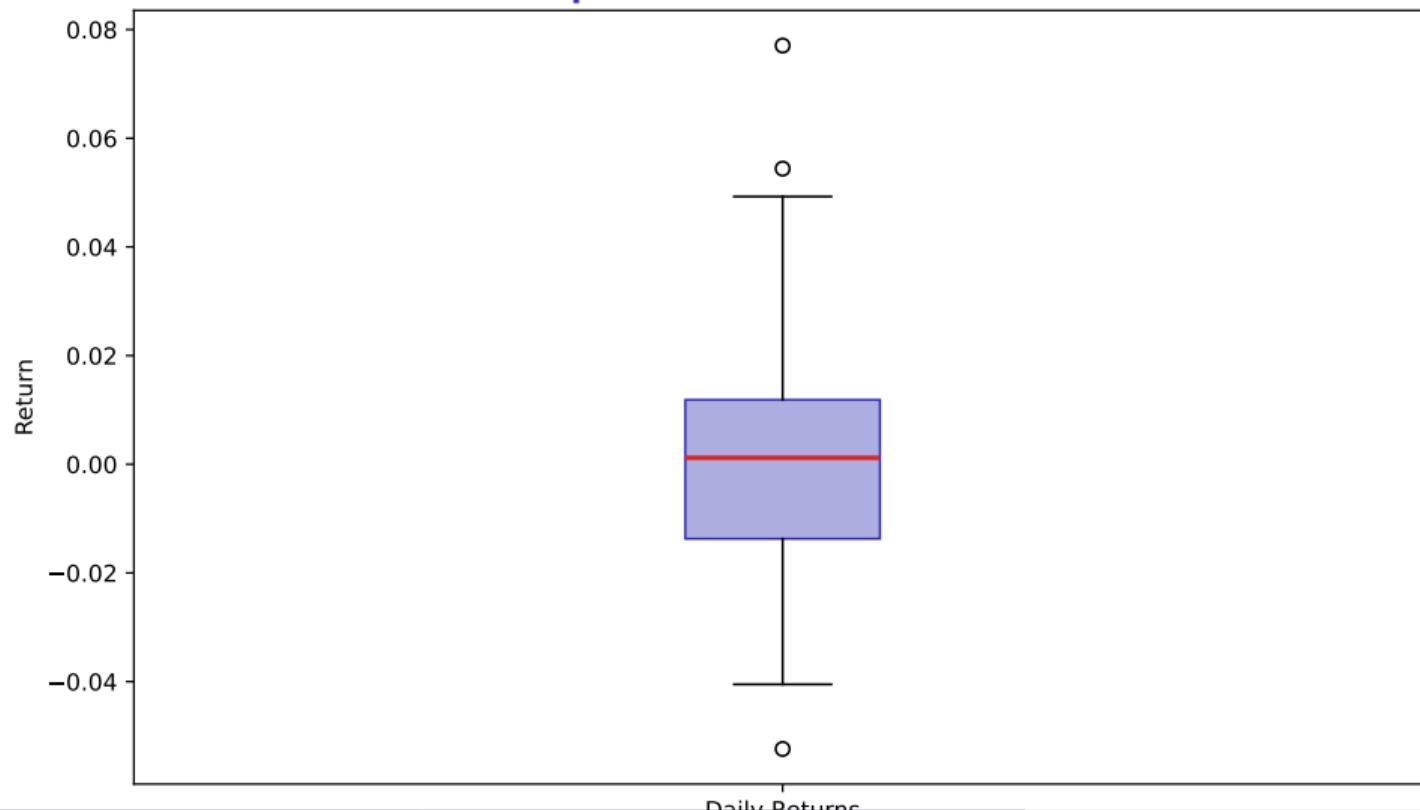

Finance application: Statistical analysis of market data

Central Tendency: Mean vs Median

Dispersion

Dispersion: Std Dev = 0.0193

Quartiles and Percentiles

Minimum: -0.0524

Q1 (25th): -0.0137

Median (50th): 0.0012

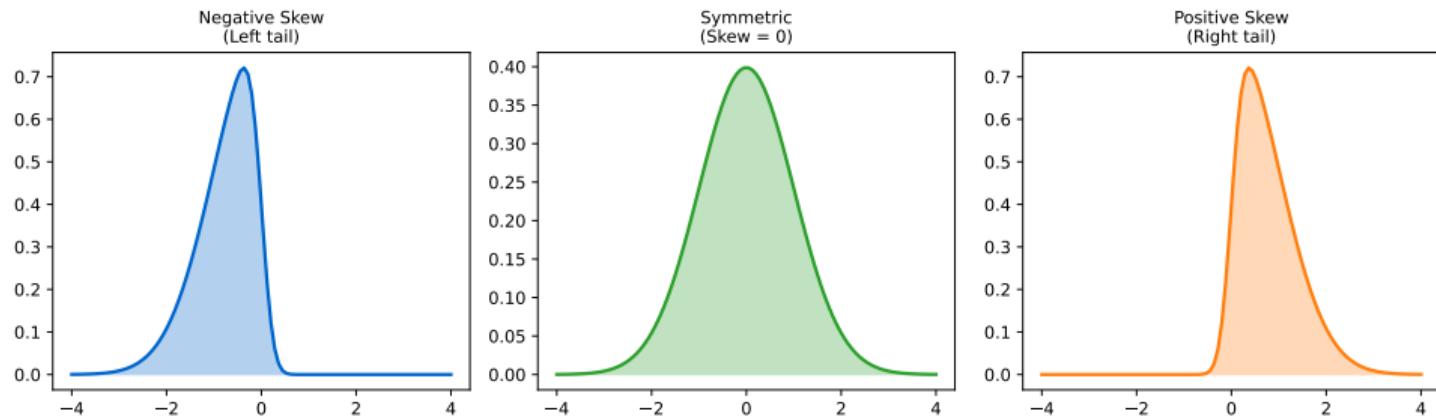

Q3 (75th): 0.0119

Maximum: 0.0771

IQR: 0.0256

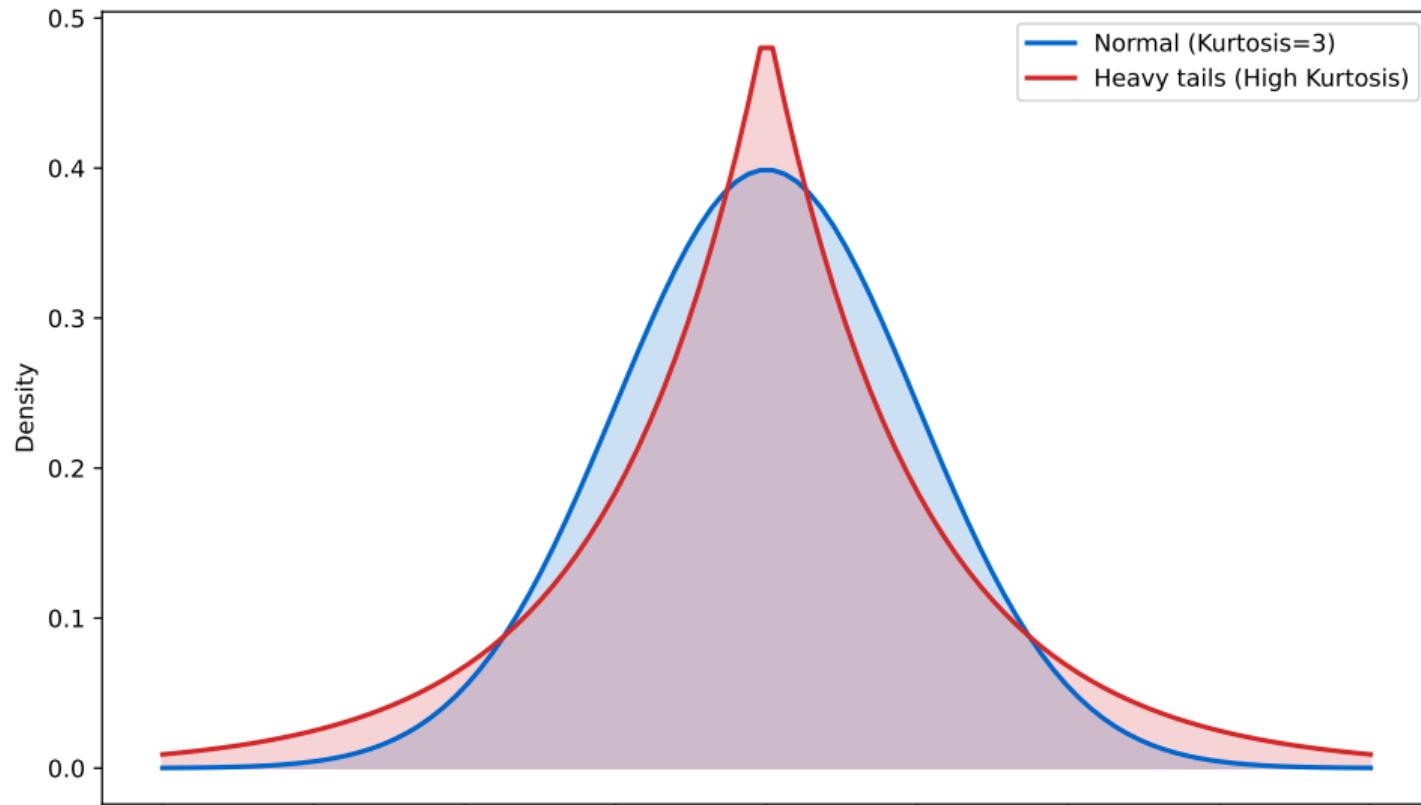

Skewness

Skewness in Return Distributions

Statistical foundation for data-driven decisions

Kurtosis: Tail Thickness

Summary Table

df.describe() Output

Statistic	Value
Count	252
Mean	-0.0001
Std	0.0193
Min	-0.0524
25%	-0.0137
50%	0.0012
75%	0.0119
Max	0.0771

Statistical foundation for data-driven decisions

Key Finance Statistics

Annualized Return

mean * 252

-1.90%**Annualized Volatility**

std * sqrt(252)

30.65%**Sharpe Ratio**

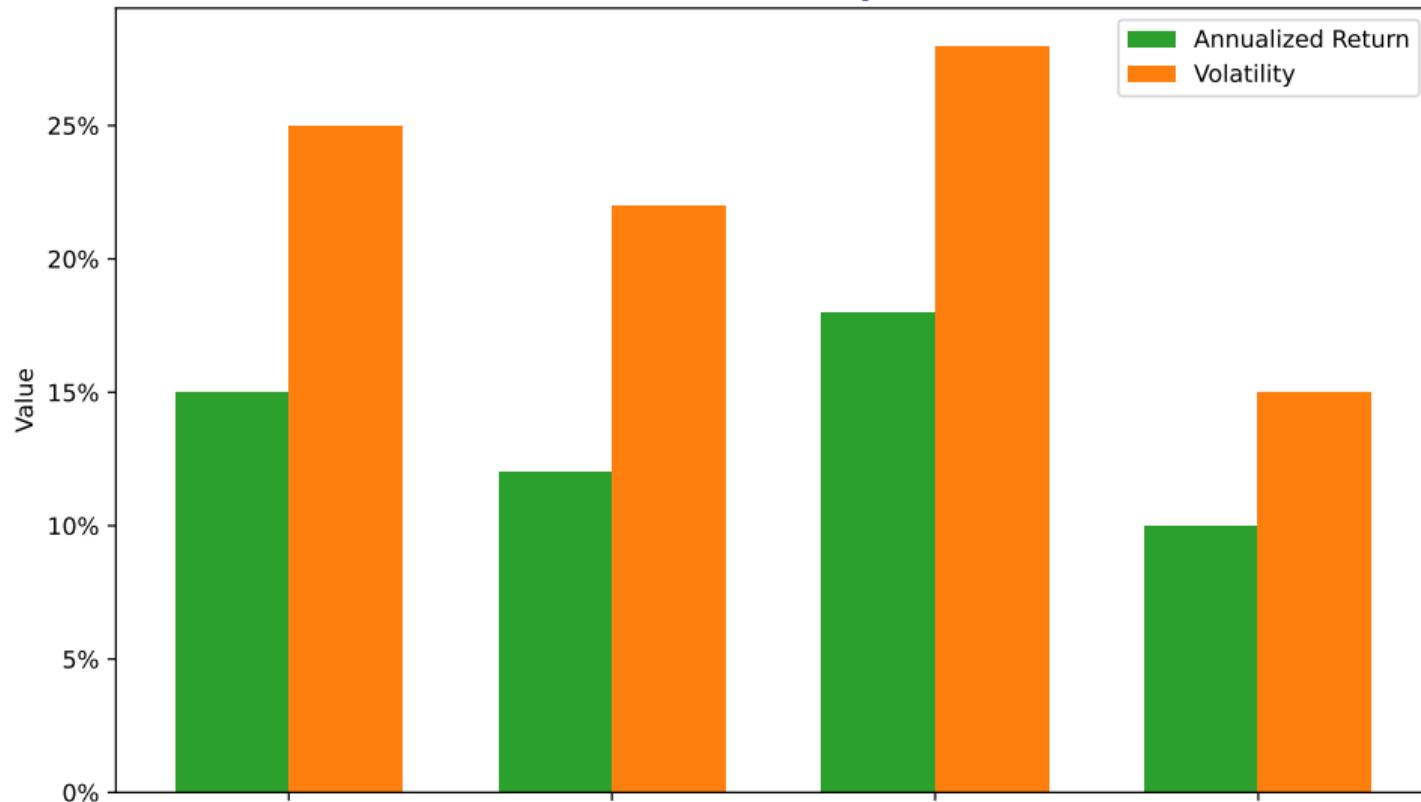

(ret - rf) / vol

-0.13**Max Drawdown**

Largest peak-to-trough

-12.5%

Risk-Return Comparison

Key Takeaways:

- Calculate mean, median, mode
- Measure dispersion (std, variance, range)
- Interpret quartiles and percentiles
- Analyze skewness and kurtosis

Statistics + Visualization = Data Science foundation
