

Sorting DataFrames with `sort_values()`

Original Order (Unsorted)

`df.sort_values('Return', ascending=False)`

`df.sort_values('Volume', ascending=True)`

Multi-Column Sorting

Sort by single column

```
df.sort_values('Price')
```

Sort descending

```
df.sort_values('Price', ascending=False)
```

Sort by multiple columns

```
df.sort_values(['Sector', 'Return'], ascending=[True, False])
```

Sort by index

```
df.sort_index()
```

Reset index after sort

```
df.sort_values('Price').reset_index(drop=True)
```
